Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, and 10-28, drawn to apparatus for cooling a hot rolled steel strip, classified in class 266, subclass 259.
- II. Claims 7-9 and 29-31, drawn to method of manufacturing a hot roll steel, classified in class 148, subclass 645.

The inventions are distinct, each from the other because of the following reasons:

Inventions of group II and group I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another materially different apparatus having continuous quick cooling section and laminar cooling section with nozzle units injecting cool water at a prescribe angle to enable a smooth and uniform cooling treatment, as evident by Japanese patent 62-260022, submitted by applicant.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

1) apparatus and method for cooling without tension, finishing mill and coiler ;  
claims 1-6 and 7-9 .

2) apparatus and method for cooling with rapid water removal from surface:  
claims 10-19.

3) apparatus and method for cooling such that top end of strip moves smoothly  
from final finishing mill to coiler: claims 20-29.

Claims 30 and 31 are linking claims to groups I to 3.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. There is no generic claim.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Mr. Richard Barth on March 12, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
